

STANDARD ADJUSTABLE STEERING COLUMNS

Adjustable steering columns are not only a safety feature, but an excellent way to eliminate flex and binds in your steering shaft. Columns are labeled with the length from the end of the housing to the beginning of the adjustable shaft and there is 8" of adjustability. Actual compressed and extended lengths are provided below for your reference. Quick releases are available in steel for NASCAR competitors, aluminum, and lightweight for weight conscious short track racers.

405-10207	3 Hole

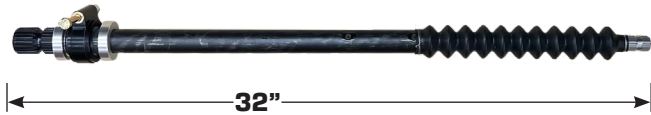

LIGHTWEIGHT ADJUSTABLE STEERING COLUMNS

Lightweight Adjustable Steering Columns are a more simplified version of our standard column. These columns utilize a 1-1/8" Rod End style support hanger to be used with a steering column bracket, or a Mono-ball style hanger to be used with our Dash Bar Brackets. These columns are welded and assembled in Kalamazoo Michigan using the finest materials available. All Lightweight Adjustable Steering Columns come complete with our Aluminum Quick Release.
